Notes Submit Feature

Version:	1.0
Date:	January 15, 2025
Status:	Approved for Development
Document Owner:	Jordan Chen, Product Manager

Executive Summary

Notes Submit enables sales representatives and account managers to capture meeting notes and customer interactions directly within AcmeCRM without switching to external note-taking applications. This feature addresses a critical workflow inefficiency that costs users time and reduces data completeness in our CRM system.

Problem Statement

Sales representatives and account managers currently lose valuable time and context by switching between AcmeCRM and external note-taking applications during client meetings. Post-meeting, they must manually copy notes back into the CRM, leading to:

- Lost context and incomplete customer records
- Wasted time averaging 10-15 minutes per meeting
- Reduced CRM data quality and adoption
- Friction in the user workflow during high-pressure sales interactions

Target Users

Primary: Sales representatives who conduct 5+ customer meetings per week
Secondary: Account managers who maintain ongoing customer relationships and document interactions regularly

Solution Overview

Notes Submit provides an integrated note-taking interface within AcmeCRM that allows users to:

- Capture notes directly in the CRM during meetings without context switching
- Automatically associate notes with the correct customer account and contact
- Access notes immediately in the customer record for future reference
- Search and filter notes across all customer interactions
- Tag notes with meeting types, topics, and action items

Success Metrics

Metric	Target	Measurement Period
Feature Adoption Rate	65% of active users	90 days post-launch
Weekly Active Users	85% of adopters	Weeks 2-4 post-adoption
Time Saved per Meeting	10+ minutes	User survey at 30 days
CRM Data Completeness	+25% notes volume	60 days post-launch

User Stories

Core User Flows

Story 1: Quick Note Capture

As a sales rep in a customer meeting, I want to quickly capture notes without leaving AcmeCRM so that I can stay focused on the conversation and ensure all context is captured in the CRM.

Story 2: Note Organization

As an account manager, I want to tag and categorize my notes so that I can easily find specific interactions when planning follow-up actions or reviewing account history.

Story 3: Team Collaboration

As a sales team member, I want to see notes from my colleagues on shared accounts so that I can maintain continuity in customer relationships and avoid asking customers to repeat information.

Technical Requirements

Frontend

- Rich text editor with formatting options (bold, italic, bullets, numbered lists)
- Auto-save functionality every 30 seconds
- Inline tagging for meeting type, topic, and action items
- Search interface with filtering by date, tag, and customer
- Mobile-responsive design for tablet and phone access

Backend

- RESTful API endpoints for CRUD operations on notes
- Real-time sync across devices for the same user
- Data encryption at rest and in transit
- Integration with existing CRM permissions model
- Support for 10,000+ notes per user without performance degradation

Implementation Timeline

Phase	Deliverable	Date
Design	Wireframes and user flows	Nov 20, 2024
Design	High-fidelity mockups	Dec 5, 2024
Development	Backend API complete	Dec 22, 2024
Development	Frontend MVP complete	Jan 8, 2025
Testing	Internal beta launch	Jan 8, 2025
Launch	General availability	Jan 15, 2025
Analysis	30-day metrics review	Feb 15, 2025

Risks and Mitigation

Risk	Impact	Mitigation Strategy
Low adoption due to existing workflow	High	Conduct user research and targeted onboarding
Performance issues with large note volumes	Medium	Implement pagination and lazy loading
Data sync conflicts on mobile devices	Medium	Use conflict resolution with last-write-wins
Integration with mobile apps delayed	Low	Launch desktop first, mobile as Phase 2

The Team

Role	Name
Product Manager	Jordan Chen
Designer	Sam Okafor
Program Manager	Alex Rivera
Engineering Manager	Maya Patel
Tech Lead	Chris Thompson
Backend Developer	Priya Singh
Frontend Developer	Marcus Johnson
Content Lead	Taylor Washington

Open Questions

- Should notes be editable after submission, or locked after a time period?
- What level of formatting should be supported in the mobile version?
- How should we handle notes on deleted or merged customer accounts?
- Should we implement voice-to-text for hands-free note capture?
